SUMMARY

Junior Frontend Developer with experience working in a team environment using Agile / Scrum methodology. Involved in building responsive and adaptive user interfaces and collaborating effectively within cross-functional teams. Strong attention to detail, responsible in task execution, and motivated to continuously improve frontend development skills. Motivated and interested in web application development.

PROJECT EXPERIENCE

Individual project:

[Business promotion](#), [Link](#) [HTML, CSS, JS]

Role: Frontend Developer

A web application designed to support business promotion and client interaction. The system provides functionality for presenting services, introducing a development team, and enabling client registration. Includes a structured multi-section interface and a registration form for collecting and managing user data.

[Currency converter](#), [Link](#) [Next.js, React, JS]

Role: Frontend Developer

Includes functionality for converting currencies based on current exchange rates. Provides a multi-page interface with a conversion tool and a separate page displaying exchange rates of a selected currency against others.

[Crypto app](#), [Link](#) [React, JS]

Role: Frontend Developer

Developed a cryptocurrency wallet interface for tracking assets and profitability. Implemented dynamic data visualization (charts) to display portfolio composition. Added advanced table sorting (by name, amount, and price) to improve usability and data analysis.

Group projects:

[ArtUnity](#), [Link](#) [HTML, CSS, JS]

Role: Developer / Scrum master

A web application for discovering and exploring music content. Includes a homepage with featured content and recommendations, a music library with artists and tracks, and an informational page about the project. Designed as a multi-page platform focused on user-friendly navigation and content presentation.
